AFRL awards contract to Black River Systems Co. of Utica

by Fran Crumb, Information Directorate

ROME, N.Y. — The Air Force Research Laboratory has awarded a \$99,975 contract to Black River Systems Co., Inc., of Utica, for research to improve management of multi-function radar systems. The nine-month effort, “Novel Concepts for Multi-Mission Radar,” is funded under the federal government’s Small Business Innovative Research (SBIR) program.

“The company’s researchers will be studying ways to apply knowledge-aided techniques to multi-mission, multi-radar surveillance systems,” said Jeffrey T. Carlo, program manager in AFRL’s Sensors Directorate. “The focus of this effort is the development and demonstration of knowledge-based processing algorithms for improved system performance and RF resource management.” @
